**Subject:** Source Control Data Gaps Work Plan, NW Natural, Gasco Site  
**Date:** 08/06/2007 09:55 AM

---

Good morning Kristine.

This e-mail is to inform you that last week I sent a copy of the above-referenced work plan to you on a CD sent via regular mail. A CD was also sent to Eric and Chip.

The work plan includes scopes of work for to address source control data gaps on the property owned by NW Natural, including: 1) subsurface geophysical logging to evaluate the horizontal and vertical extent of NAPL along the Gasco portion of "Segment 1;" 2) surface geophysical methods to evaluate the configuration of the top of the silt unit (i.e., the bottom of the fill) beneath the site; and 3) storm water system component sediment sampling and follow-up storm water sampling.

The work plan also includes a scope of work for drilling and installing monitoring wells along "Segment 2" of the site. In the interest of having the groundwater data from Segment 2 available for the DNAPL/groundwater FFS, drilling, installation, and sampling of the Segment 2 wells was completed in July.

DEQ is providing the document for your information and files. I understand that you have requested hard copies of documents be submitted as well. In the future electronic and hard copy versions of submittals will be routed your way.

Kristine, please feel free to contact me at 503/229-5543 or by e-mail if you have questions regarding this transmittal.

Mr. Dana Bayuk, Project Manager  
Cleanup & Portland Harbor Section  
Oregon Department of Environmental Quality
